

3 Questions to....

...Thomas Zadrozny from Pro-Active

What has been most surprising for you related to your involvement in PANBioRA?

While working on the value chains of the different technologies used in PANBioRA, the Analysis of Antibody Response to Biomaterials has been most fascinating for me, as we could elaborate added value work in this field.

What has been most challenging for you during the past two years of PANBioRA?

So far all tasks could have been under performed without any major delays. Integrating the different Work Packages into one device will be challenging but at the same time very exciting.

From your point of view: What will be the biggest impact of PANBioRA?

An easy to use performant biosensing platform in a growing market segment.

About Pro-Active sprl

Pro-Active is a “knowledge based” company providing services in the fields of: Scientific and technological advice – Key Enabling Technologies, Innovation management, value chains, forward studies, project design, implementation and management, business plans and commercialisation, evaluation and monitoring, strategy design, road mapping, policy recommendations, international cooperation, ICT, IoT, Big data analysis and cloud technology.

Role in PANBioRA:

Pro-Active provides transversal know-how such as technology watch, value chain analysis, business plans, networking, and policy recommendations in order to optimise the research and scale up effort of PANBioRA.
